CERTIFICATES : https://bit.ly/3LHq5Ab

PROJECTS

GAutomation + Site Revamp

Analyse and Help in Building a Cloud Platform with Cognitive Techniques Consisting of Tools, Frameworks and Test Infrastructure. The Main Focus is on the Automation Framework processes which Includes a Collection of Tools and Processes Working Together to Support Automated Testing of Any Application and Performance Testing to Validate and Measure Various Application Parameters. Designing and Revamping the Screens which Includes Updating Content, Refreshing Layouts, and Improving Navigation for better Site Performance.

Turbo Probe

Is an Upcoming Project Under processing with Separate Dashboard for Admin and User. By Using the Unique Test Plan ID we can Select the Master Virtual Machine, Add User, Slave Machines and Send Report to the User. Execution ID for live Results or the Report which can be Downloaded, with the User List user ID, Role and Client Details can be Accessed.

Trader Joe's Warehouse Portal

Portal brings technology and logistics solutions to last-mile industrial facilities. Has dealt with the vendor pickup management process. Pending and scheduled tabs with pickup date editing, route optimization, reporting, and history are added to the warehouse portal associated with being responsible for loading and unloading trailers and for moving materials from the warehouse to stores located in various areas.

Continues Incident Telemetry

Incident management systems monitor in order to quickly detect, prioritize, diagnose, and resolve performance issues that are disrupting normal service operations, and they have an incident response plan in place to quickly resolve incidents and to add new resolutions.

G10X Website

The G10X official website has been designed by considering the needs and fulfilling its intended function by conveying its particular message while simultaneously engaging the visitor. Several factors, such as consistency, colors, imagery, simplicity, and functionality, are also considered.
